

2013 SATU Joint Research Scheme Project Report – Project A	
Project Title	Uncovering the dynamic mechanisms in pathogenesis of dengue virus infection
NCKU PI / Co-PI	Perng, Guey Chuen/ Lin, Yee-Shin
NCKU Host Unit	Center of Infectious Disease and Signaling Research
Foreign Co-PI and Institute	Jang Hann, Justin, National University of Singapore Sazaly AbuBakar, University of Malaya at Kuala Lumpur Daisy Vanitha John, University of Malaya at Sabah
Visiting date	September 2, 2013
<p>I. Objectives To uncover underappreciated parameters that may play an essential role in pathogenic cause of DHF/DSS</p> <p>II. Collaborative Strategy An international mini-symposium was held at NCKU with inviting speakers from SATU member universities in order to establish a mutual ground for a collaborative project.</p> <p>III. Summary of Current Progress in Collaborative Research With the overall attendances more than 70 participants for the mini-symposium, the collaborative research forum was considered a success. As a result, a couple of key concepts have been achieved:</p> <ol style="list-style-type: none"> 1. Establishing a research platform that can serve as an updated information exchange gate for researchers working on the subject. 2. An expanded international symposium is proposed. <p>IV. Future Perspectives Will focus on the structural biology research project that can uncover the complexity formation between protein-protein interactions.</p>
